Epidemiologic Management & Consulting

is a full-service contract research firm specializing in the design, conduct, and analysis of epidemiologic research, surveillance, and disease outbreak management. We deliver expert consulting solutions to our national and international clients with integrity and superior service.

Our team of experienced public health and research epidemiologists is prepared to meet any challenge. Using an evidence-based and informed approach, we provide guidance in public health practice and program management. This allows our clients to achieve practical and cost-effective solutions.

We work closely with our clients to ensure that our services meet their evolving needs. Our team is experienced in core areas of epidemiology and public health. Whenever necessary, we access our global network of experts to address project needs.

Our team represents a broad array of expertise, including epidemiologic and statistical methods, emergency preparedness, infectious and chronic disease epidemiology, research in vulnerable populations, policy research, and program planning.

ADVANTAGES FOR CLIENTS

- Allows you to focus on your core activities
- No compromise on quality – integrity of our work is always maintained
- Interdisciplinary approach is applied to all of our projects
- Access to a large network of experts with a range of skills

OUR DIVERSE CLIENTELE

We work with clinician researchers, NGOs, industry, governments, agencies, universities, health institutions, the legal profession and other interested parties.

We use our network of experts in various areas of epidemiology and public health to address a wide array of consultation requests, from the most basic requests to the most complex projects.

flexible solutions for your project needs

WITH YOU AT EVERY STEP OF THE RESEARCH PROCESS

We offer services at all stages of epidemiologic research and surveillance projects, including specialized epidemiologic studies and disease outbreak management.

Our process includes a consultation stage with the client to discuss project objectives, timelines, and deliverables. We provide the client with a proposal outlining the scope and budget of the project, a business plan, as well as an interim and final report.

We can provide training in epidemiology and related research methods on an individual, group or company-wide basis. We support novel epidemiologic tools and biostatistical methods, as well as quantitative and qualitative epidemiologic approaches.

We provide tailored services to assist our clients in identifying and managing health issues. Similar to contract research organizations (CROs) in the pharmaceutical industry, we offer a wide range of research services for the public and private sectors.

OUR SPECIALTIES

- Design, conduct and analysis of observational and controlled studies
- Design and evaluation of surveillance systems for chronic and communicable diseases
- Disease outbreak investigation and management, situation analysis and risk assessment
- Design of study protocols, surveys, questionnaires, case report forms
- Survey management (including polling and data management)
- Preparation of grants, meta-analyses and systematic reviews
- Submissions for ethical review
- Health promotion and policy analysis
- Evaluation of public health prevention programs and interventions
- Pharmacoepidemiology and health technology assessment
- Development of Best Practices Guidelines
- Development of standard operating procedures (SOP) and memoranda of agreement (MOU)

OUR CODE OF CONDUCT

- Project needs are determined with a client focus to ensure satisfaction
- Fees are structured based on project requirements and are discussed upfront
- Timely deliverables and prompt publication of manuscripts guaranteed
